PROFILE

Senior fullstack engineer and certified n8n Ambassador with 3+ years building production-grade AI platforms, automation engines, and multi-tenant systems. Specialist in AI evaluation frameworks, LLM orchestration, and self-healing automation. Ranked top 15 GitHub contributor in Ethiopia with 70+ public repositories.

PROFESSIONAL EXPERIENCE

LohnPulse, Senior Full-stack Developer

- Production SaaS managing complex payroll workflows and tax advisor data with strict RBAC and Row-Level Security
- Next.js 15 Partial Pre-rendering: static shell served from edge in <50ms; user-specific data streamed via React Server Components
- Dynamic per-tenant cache tagging for granular CDN purges; JWT verification and tenant context injection at middleware edge layer
- Maintained 194+ Playwright tests (E2E, API, UI) ensuring zero-regression production deployments

Pest Leads Pro, Fullstack Engineer & Automation Expert

03/2025 – 08/2025

Washington DC, United States

- Architected end-to-end lead generation platform v2.5: SEO landing pages, paid acquisition funnels, AI chat widget, and quality scoring
- Built n8n-based Router Agent for intelligent vendor matching, credit management, and automated multi-channel outreach pipelines
- Engineered Digital PR automation: spike detection, GPT-generated press pages, Hunter.io outreach, and embeddable trend charts
- Deployed background agents (Gardener SEO, Performance Manager, Auditor) and vendor portal with full PostgreSQL ops

TapToSign, Full Stack Developer

09/2024 – 01/2025

I delivered end-to-end solutions for two international clients at taptosign, including the TapToSign digital-signature platform, building high-performance RESTful APIs with Go (Gin/net/http), PostgreSQL, and Redis for low-latency backend services. I developed a responsive Preact and TypeScript SPA with Tailwind CSS for the frontend, and containerized services with Docker, setting up CI/CD pipelines via GitHub Actions.

Orizon Technology, Senior Lead, AI Engineering

08/2025 – 05/2026

- Lead architecture, development, and deployment of ML-driven intelligent applications for enterprise clients
- Partner with cross-functional teams to translate business requirements into scalable AI solutions; mentor junior developers
- Design human-in-the-loop validation pipelines, automated monitoring, and self-healing recovery for production LLM deployments
- Drive responsible AI practices: ethical use frameworks, bias audits, and model evaluation protocols

DOT ETHIOPIA,

08/2024 – 04/2025

MERN Developer & Backend Development Lead

I led the backend architecture for three MERN applications at DOT, using TypeScript and Node.js to build secure, scalable services with clean architecture. I enforced type safety with DTOs, set up GitHub CI/CD pipelines with ESLint/Prettier, and implemented JWT cookies and XSS/CSRF protections. Using Redis for caching, I optimized performance, cutting database load. I have applied modular design and security-performance balance, leveraging MongoDB, React, and Git.

Hubstaf, *Mern Stack Developer*

06/2024 – 03/2025

As a MERN-Stack Developer at chrisFitApp, I built a real-estate platform with MongoDB, Express.js, and Node.js (TypeScript) for scalable backend, and React with Next.js for SEO-friendly, Tailwind-styled UI. I added secure JWT authentication and used ESLint/Prettier and Git workflows.

Aldia, *NuxtJS Front-End and QA Developer*

10/2024 – 10/2024

Designed comprehensive end-to-end test suites using Cypress. Integrated automated testing into the CI/CD pipeline, applying component-driven development and TDD best practices while quickly ramping up on both Storybook and Cypress workflows.

EDUCATION

Addis Ababa University,

Bachelor's Degree in Information Science

DOT Ethiopia, *MERN Stack Development*

A2SV, *DSA*

01/2024 – 05/2025

Over two years of intensive problem-solving in data structures and algorithms—mastering patterns like dynamic programming, graphs, trees, and sortin

SKILLS

Programming Languages (Python, JavaScript, TypeScript, C#, C++) | **Development** (React, Next.js, Angular, Nuxt.js, Tailwind CSS, Node.js, Nest.js, Django, Flask, Prisma, Mongoose, OAuth, Cypress) | **INFRASTRUCTURE & DATA** (PostgreSQL, MongoDB, DynamoDB, Firebase, Redis, OpenAI APIs, Pandas, Docker, GitHub Actions, Make, Git, AWS) | **DSA & Algorithms Specialist** (Over two years of intensive problem-solving in data structures and algorithms—mastering patterns like dynamic programming, graphs, trees, and sorting—culminating in graduation from the A2SV intensive training program; regularly applied optimized solutions in Python, C++ to enhance backend performance and inform architectural decisions.)

PROJECTS

Github ReadMe Generator

I developed a web app that uses the GitHub Public API to fetch repository details and file contents, generating customized README.md files with LLaMA 3. Built with a Next.js frontend for a seamless UI and a Node.js backend for API handling, it automates documentation by sending GitHub data to LLaMA 3 for markdown creation. I worked on API integration and AI-driven content generation, using Next.js, Node.js, GitHub API, and LLaMA 3.

Local Context Orchestrator (MCP Server)

I developed a web App featuring a superadmin page to manage all admin behaviors and perform basic CRUD operations and KPI tracker. Built with a Next.js frontend for a responsive interface and a Node.js backend for secure data handling, the app enables seamless control over admin actions and data management.

RAG Evaluation Framework

- Automated test generation, multi-dimensional scoring, and hallucination detection for retrieval-augmented generation apps
- Deterministic pass/fail harness with golden datasets and regression tracking (SWE-bench-style AI evaluation architecture)
- Continuous evaluation pipeline with MLflow experiment tracking and performance regression alerting

Compliance Navigator

- Designed and built Compliance Navigator, mapping regulatory frameworks (e.g., SOC 2, GDPR, HIPAA) to operational business processes with automated violation detection and actionable remediation guidance
- Implemented a pluggable rule engine supporting custom compliance rules, weighted severity scoring (Critical → Info), and allow/deny decision trees for policy evaluation at runtime
- Architected a tamper-proof audit trail using cryptographic hash chaining to ensure immutable, verifiable compliance decision history for regulatory audits

ORGANISATIONS

n8n , <i>volunteer ambassador</i>	06/2026
Lumen Lab , <i>CTO</i>	2025

DECLARATION

I hereby declare that the information provided in this resume is true, complete, and correct to the best of my knowledge and belief.
